

Expected Output of the C++ File Management Program

When you run `file_management.exe` in the terminal, the program will provide a menu to interact with the file system. Below is an example of how the output will look when executing different operations.

1. Running the Program

```
sh
```

[Copy](#) [Edit](#)

```
C:\Users\YourName\Documents\CPP_Project> file_management.exe
```

Program Output:

```
mathematica
```

[Copy](#) [Edit](#)

```
File Management Tool
1. Write to file
2. Append to file
3. Read from file
4. Exit
Enter your choice:
```

2. Writing to the File

- User Input: `1`
- Program Output:

```
kotlin
```

[Copy](#) [Edit](#)

```
Enter data to write to the file: Hello, this is a test message.
Data written successfully.
```

3. Appending to the File

- User Input: `2`
- Program Output:

```
CSS
```

[Copy](#) [Edit](#)

```
Enter data to append to the file: Adding more content.
Data appended successfully.
```

4. Reading the File

- User Input: 3
- Program Output:

kotlin

Copy Edit

File contents:

Hello, **this is** a test message.

Adding more content.

5. Exiting the Program

- User Input: 4
- Program Output:

nginx

Copy Edit

Exiting program...

6. Verifying `data.txt` File Content

After running the program, if you check `data.txt`, its content should be:

kotlin

Copy Edit

Hello, **this is** a test message.

Adding more content.

You can verify this using the command:

sh

Copy Edit

type data.txt

or opening it in **Notepad**:

sh

Copy Edit

notepad data.txt
